Technique	Requirements	Points
Hierarchical Animated Model	When going to higher iterations of the fractal ferris wheel using arrow keys (↑, ↓), the other wheels have individual rotations while also following the part of the wheel they're connected to.	25
Sweep Objects	The roller coaster track is built using a sweep following the path of the CubicBspline class.	25
Subdivision	The arrow keys (↑, ↓) can be used to increase the iterations of the smaller ferris wheels (Fractal)	50
	The arrow keys (←, →) can be used to increase the precision of the ferris wheel's roundness (Tessellating)	+5
Texture Mapping	The tree sprites (increase density with numline- and numline+) The crowbar and crosshair in first person (toggle with E)	20 +5
Change the Navigation System	Can go into multiple different first-person perspectives and the original isometric camera using button on number line. (1=Walking, 2=Roller Coaster, 3=Ferris Wheel, 0=Isometric)	20
Parametric Instancing	Forest built using a single tree object. Each (x, y) parameter is based on sudo-random numbers for each x and y value.	20
